

# Counterfeit Product Warning

DON'T BE FOOLED BY SHODDY IMITATORS!

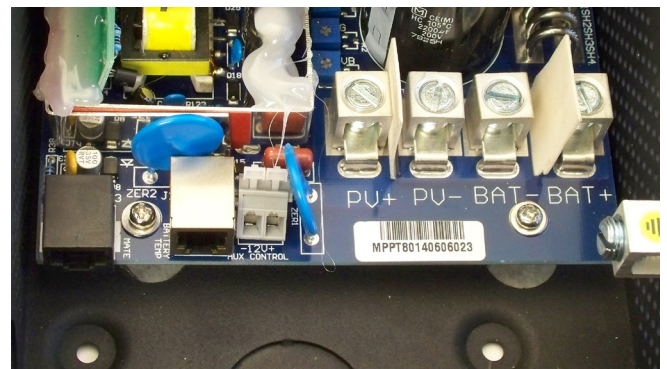

While obvious effort has been made to copy the exterior appearance and name of the **OutBack FLEXmax products**, the same care has not been taken in other aspects of the product including internal design, assembly and packaging.

## Counterfeit Product Deficiencies:

- Poorly assembled products – plastic wedges used to fix fitment issues
- Use of inferior components and materials that can lead to early failure
- Use of “hot glue” to secure internal components instead of appropriate fasteners
- Substandard packaging and documentation
- Lack of certifications and agency approvals
- No published warranty information

Imitators use, what looks like, big globs of hot glue to secure components.

Imitators use inferior materials and construction that can lead to early failure.

Poorly-assembled products use plastic wedges as a fix agent for spacing problems.

**These deficiencies and general quality issues have compelled OutBack Power to issues this service bulletin and warning.**
