

Let's Reimagine Renewable

NEVER LOSE POWER AGAIN WITH SOLAR BACKUP

Electricity is critical to everything we do in our lives. From lighting our homes and businesses to charging our electric vehicles. It's something we've come to take for granted as reliable and affordable.

BENEFITS OF A BACKUP POWER SOLUTION

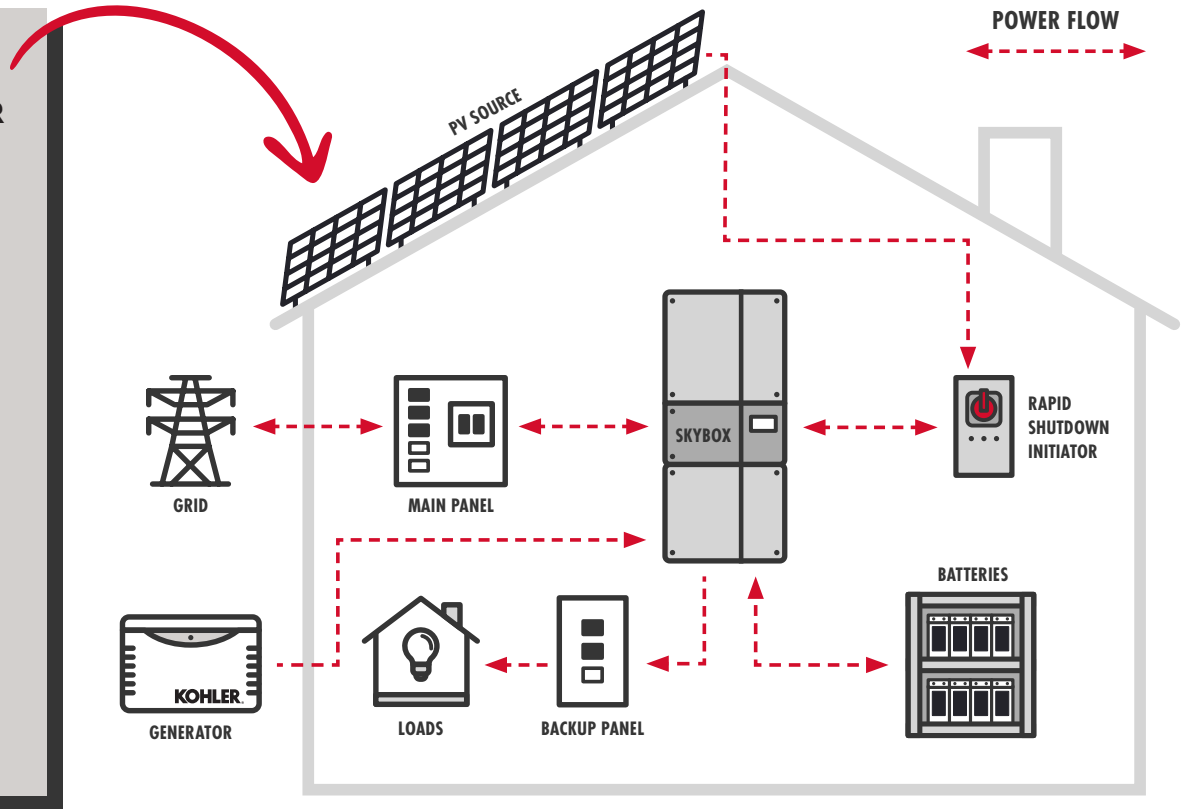

SAFETY

SAVINGS

INDEPENDENCE

As solar energy is generated it is used to power your home in place of electricity from the grid. Any electricity generated in excess of what you use can be stored in the battery for use during peak rate times, Public Safety Power Shutoff or other outage.

Backup power is extended indefinitely in all weather conditions through automatic activation of the integrated generator whenever the sufficient sunlight isn't available.

The grid can be used as much or as little as desired based on energy consumption needs and utility rates because the system's batteries are always available to power loads if the grid goes down or if peak rate charges are too high.

Contact Bay City Electric Works and be directed to a local dealer who can help set up the ideal backup power system for your home or business.
